

RISHIVAN ULTIMATE ASTROLOGY AI ENGINE MASTER IMPLEMENTATION BLUEPRINT

Prepared for the Rishivan AI / Research / Engineering Team
Implementation owner: Bharat

MISSION: Build a source-grounded, deterministic, multi-school, multi-modal, testable astrology intelligence system—not a chatbot that merely retrieves astrology PDFs.

Important: No document can honestly guarantee that a system will become “the most advanced in the world.” This blueprint is designed to maximize technical depth, source coverage, traceability, validation and extensibility. The team must prove performance through testing rather than assume it.

1. THE NON-NEGOTIABLE ARCHITECTURE

Never build: PDF → embeddings → LLM → prediction.

Build:

BOOKS / MANUSCRIPTS ↓ SOURCE REGISTRY + PROVENANCE ↓ OCR + HUMAN-VERIFIED TEXT ↓ BOOK → CHAPTER → VERSE/PASSAGE ↓ DOMAIN / SCHOOL MAPPING ↓ CONCEPT ONTOLOGY ↓ KOONJI RULES ↓ KNOWLEDGE GRAPH ↓ DETERMINISTIC ASTRONOMICAL CALCULATOR ↓ PARASHARI / JAIMINI / NADI / KP / PRASHNA / TAJIKA / MUHURTA ENGINES ↓ CONFLICT + EVIDENCE + BACKTESTING ↓ MASTER SYNTHESIS ENGINE ↓ LLM EXPLANATION

The LLM is the explanation and orchestration layer, not the authority for astronomical calculation or canonical rule invention.

2. BOOK CORPUS — MASTER ACQUISITION UNIVERSE

Use the previously supplied Rishivan Complete Master Book Acquisition List as the corpus roadmap. The following are the priority source families the team must explicitly support.

Corpus	Priority source families
Bibliographic master	David Pingree — Census of the Exact Sciences in Sanskrit, Vols. 1-5; Jyotishastra: Astral and Mathematical Literature; Sanskrit astronomy/Jyotisha bibliographies; manuscript catalogues
Core Hora	Brihat Parashara Hora Shastra; Brihat Jataka; Phaladeepika; Saravali; Jataka Parijata; Sarvartha Chintamani; Hora Sara; Hora Ratna; Uttara Kalamrita; Daivajna Vallabha; Jataka Tattva; Bhavartha Ratnakara; Bhava Kutuhalam; Sanketa Nidhi; Mansagari; Laghu Parashari; Sripati Paddhati
Jaimini	Jaimini Sutras / Upadesa Sutras; traditional commentaries; Chara Dasha; Arudha; Upapada; Karakamsha; Rashi Drishti literature; modern Jaimini works by established authors
Nadi	Deva Keralam / Chandra Kala Nadi; Bhrigu Sutras; Bhrigu Nandi Nadi; Bhrigu/Nandi/Saptarishi/Suka/Dhruva/Agastya/Shiva/Kakabhujandar/Kausika/Vasishta traditions; manuscript catalogues
Prashna	Prashna Marga; Prashna Tantra; Prasna Jnana; Prasna Jnana Deepika; Madhaveeyam Prasna Saram; Shatpanchashika; Daivajna Vallabha; regional Kerala/South Indian Prashna works
Tajika	Tajika Neelkanthi; Tajika commentaries; Varshaphala; Sahams; Muntha; Tajika Dasha/aspect literature
Muhurta	Muhurta Chintamani; Muhurta Martanda; Muhurta Kalpadruma; Muhurta Tattva; Kalaprakasika; Muhurta Ganapati; regional Muhurta texts
KP	KP Readers I-VI; Advanced Stellar Astrology; KP Horary; Ruling Planets; stellar/sub-lord; cusp/significator; rectification and case-study literature
Dasha/Varga	Vimshottari, Ashtottari, Yogini, Chara, Narayana, Kalachakra and lesser Dashas; D1-D60 Varga literature
Strength/Timing	Shadbala; Avastha; Ashtakavarga; Nakshatra; transit; Panchanga; planetary dignity/combustion/retrogression/war
Samhita/Omens	Brihat Samhita; Narada, Garga, Kashyapa, Vasishtha, Brihaspati, Lomasha, Ravana and related Samhita traditions; Shakuna and Swapna literature
Numerology	Indian Anka/Sankhya Shastra; Astro-Numerology; Name/Date/Business systems; Chaldean; Pythagorean; Gematria/Abjad; Katapayadi and Bhuta-Sankhya
Samudrika	Samudrika Shastra/Lakshana; Hasta Samudrika; Hasta Sanjivani; Anga Vidya; physiognomy/body-mark texts; Indian and comparative palmistry
Vastu	Mayamata; Manasara; Samarangana Sutradhara; Aparajitaprccha; Vishvakarma Vastu/Prakasha; Silparatna; Manasollasa; Rajavallabha; Purana/Agama architecture
Astronomy	Vedanga Jyotisha; Aryabhatiya; Surya Siddhanta; Pancha Siddhantika; Brahmasphutasiddhanta; Khandakhadyaka; Siddhanta Shiromani; Tantrasangraha; Yuktibhasha; Kerala school works; astronomical tables
Philosophy/context	Principal Upanishads; Bhagavad Gita; Brahma Sutras; Yoga Sutras; Samkhya Karika; Puranas; karma/rebirth literature; selected Tantra/Agama/Yoga works
Comparative	Ptolemy; Vettius Valens; Dorotheus; Firmicus; Abu Ma'shar; al-Biruni; al-Qabisi; Masha'allah; I Ching; BaZi; Zi Wei Dou Shu; Tibetan/Kalachakra astrology

3. BOOK INGESTION — THE EXACT WORKFLOW

Stage	Required implementation
1. Acquire	Legally obtain source; record license/copyright and provenance.
2. Preserve	Immutable original PDF/image/manuscript; SHA-256 hash.
3. OCR	Extract text, page coordinates, tables and diagrams.
4. Verify	Human verification for Sanskrit, names, numbers, formulas and technical passages.
5. Segment	Book → chapter → section → verse/passage → page.
6. Normalize	Sanskrit original + transliteration + translation kept separately.
7. Classify	Tradition, school, domain, concept, application, authority.
8. Extract	Concepts, definitions, rules, conditions, modifiers, exceptions.
9. Review	Expert/research review for high-impact canonical rules.
10. Publish	Versioned Koonji + graph + retrieval index.

Never let a low-quality OCR or unverified AI extraction become canonical knowledge.

4. DOMAIN MAP — THE RISHIVAN ONTOLOGY

LEVEL 1 — UNIVERSE Jyotisha / Astronomy / Numerology / Samudrika / Vastu / Philosophy / Omens LEVEL 2 — SCHOOL / TRADITION Parashari / Jaimini / Nadi / KP / Prashna / Tajika / Muhurta / etc. LEVEL 3 — CONCEPT Graha / Bhava / Varga / Dasha / Yoga / Nakshatra / Karaka / Shadbala / etc. LEVEL 4 — LIFE DOMAIN Marriage / Career / Wealth / Children / Education / Property / Health / Spirituality / etc. LEVEL 5 — QUESTION / APPLICATION Potential / Timing / Strength / Compatibility / Event prediction / Remedy context

Every book is mapped to multiple nodes. The same concept can appear in multiple books, but the source and school remain explicit.

5. BOOK × DOMAIN MAPPING — WHAT THE TEAM MUST BUILD

Book	School	Concept families	Primary applications
BPHS	Parashari	Graha, Bhava, Varga, Dasha, Yoga, Shadbala	Natal analysis + timing
Brihat Jataka	Classical Hora	Planets, signs, houses, combinations	Natal interpretation
Phaladeepika	Parashari	Planet/house results, yogas	Life outcomes
Saravali	Parashari/Classical	Planetary and house results	Natal interpretation
Jataka Parijata	Classical	Yogas, houses, Dashas	Advanced prediction
Jaimini Sutras	Jaimini	Chara Karaka, Arudha, Rashi Drishti, Dasha	Status, marriage, career, timing
Deva Keralam	Nadi	Planetary patterns and event combinations	Event/timing research
Prashna Marga	Prashna	Question chart, horary logic	Immediate decisions
Tajika Neelkanthi	Tajika	Varshaphala, Muntha, Sahams	Annual prediction
KP Readers	KP	Cusp, star, sub-lord, significator	Precise timing
Muhurta Chintamani	Muhurta	Electional rules	Choose time
Brihat Samhita	Samhita	Omens, mundane, architecture, nature	Mundane/contextual
Numerology corpus	Numerology	Numbers, names, dates	Number-based analysis
Samudrika corpus	Samudrika	Hand/body/face signs	Visual analysis
Mayamata / Manasara	Vastu	Space, orientation, architecture	Vastu analysis
Surya Siddhanta + astronomy corpus	Astronomy	Planetary calculations/time	Calculation foundation

This table is only the human-readable summary. The production database must map every chapter/verse/rule to its domain nodes.

6. THE KOONJI — BASIC RULE FORMAT

RULE_ID: RSH-PAR-MARRIAGE-0001 SCHOOL: Parashari DOMAIN: Marriage CONCEPTS: 7th house; 7th lord; Venus CONDITIONS: [machine-readable conditions] MODIFIERS: [dignity, aspects, combustion, Varga, strength...] TIMING: [Dasha / transit requirements] EXCEPTIONS: [conditions that alter result] RESULT: [traditional interpretation] SOURCE: [Book ID + edition + chapter + verse/page] AUTHORITY: S0/S1/S2/S3/S4/S5 VALIDATION: [status + test metrics] VERSION: 1.0

The books contain the raw rules. The Koonji makes those rules computable, searchable, explainable and testable.

7. BASIC RULES THE ENGINE MUST UNDERSTAND BEFORE DEEP CORPUS EXTRACTION

These are foundational rule families, not a substitute for the books. The production engine must ultimately derive and cite the detailed rules from the corpus.

Rule family	Minimum engine capability
Graha	Planet identity, natural significations, functional role, dignity, strength, motion, combustion, retrogression, conjunctions.
Rashi	12 signs, elements/modalities/qualities, lords, dignity, sign relationships and school-specific meanings.
Bhava	12 houses, significations, lordship, occupancy, aspects, strength and derived houses.
Lagna	Ascendant calculation, Lagna lord, Lagna strength and relationship to key houses.
Drishti	School-specific aspect rules; never assume one universal aspect model.
Dignity	Exaltation, debilitation, own sign, friend/enemy, moolatrikona and other tradition-specific dignities.
Nakshatra	27/28 traditions, lords, padas, deities, Tara relationships and school-specific interpretations.
Varga	Correct construction and interpretation of D1 through relevant divisional charts; preserve competing rules.
Yoga	Recognize combinations, required conditions, cancellation/modification and relevant timing.
Dasha	Calculate supported Dashas exactly; apply school-specific interpretation and sub-period logic.
Transit	Calculate transits and apply tradition-specific transit rules.
Shadbala/Avastha	Calculate and expose strength/planetary-state components where supported.
Ashtakavarga	Calculate BAV/SAV and supported transit interpretations.
Jaimini	Chara Karakas, Rashi Drishti, Arudha, Upapada, Karakamsha, Chara Dasha etc.
KP	Cusps, star lords, sub-lords, significators, Ruling Planets and KP-specific timing.
Prashna	Question-time chart, relevant houses, significators, horary-specific rules.
Tajika	Annual chart, Muntha, Sahams, aspects and Tajika-specific logic.
Muhurta	Panchanga factors, electional rules and domain-specific exceptions.
Nadi	Pattern matching only within validated Nadi source traditions; preserve source provenance.
Cross-system	Compare independent signals without silently merging doctrines.

8. FOUNDATIONAL REASONING RULES — HOW THE ENGINE SHOULD THINK

The following are architectural reasoning principles, not universal astrological claims.

1. Never interpret one factor in isolation. Use the relevant chart context, strength, modifiers and corroboration required by the selected school.
2. Separate potential from timing. Natal promise and event timing are different reasoning problems.
3. Separate calculation from interpretation. The calculator produces facts; the school engine interprets them.
4. Use hierarchy of evidence. Primary classical source > established commentary > established practitioner > experimental material, unless a configured research protocol says otherwise.
5. Never mix schools silently. If a Jaimini rule is used alongside Parashari, label both.
6. Track conditions and exceptions. A rule without its conditions is an incomplete rule.
7. Use multiple confirmations for high-stakes predictions. Require configurable corroboration rather than a single yoga or placement.
8. Don't turn correlations into certainties. Output confidence/evidence levels and explain uncertainty.
9. Backtest before promotion. A rule becomes production-grade only after defined evaluation.
10. Source every canonical claim. The user or researcher should be able to trace it to a source.
11. Version every rule. Never silently alter a historical rule.
12. Preserve disagreements. Contradictory sources become explicit alternative interpretations.

9. EXAMPLE: HOW RISHIVAN SHOULD ANSWER A MARRIAGE QUESTION

USER QUESTION ↓ Intent = Marriage + Timing ↓ Relevant concepts 7th house / 7th lord / Venus / Jupiter / D9 / Darakaraka / Upapada ↓ Select schools Parashari + Jaimini + KP + Nadi (if configured) ↓ Calculate chart facts ↓ Retrieve Koonji rules ↓ Apply conditions/modifiers/exceptions ↓ Run timing engines Vimshottari + Jaimini timing + KP timing + Transits ↓ Compare signals Convergence / conflict / missing evidence ↓ Backtest-informed confidence ↓ Master synthesis ↓ LLM explains the conclusion with source traceability

10. KNOWLEDGE GRAPH — THE RELATIONSHIP LAYER

Build entities and edges, not just document chunks.

Entity	Examples
Planet	Sun, Moon, Mars, Mercury, Jupiter, Venus, Saturn, Rahu, Ketu
Sign	12 Rashis
House	1-12 Bhavas
Nakshatra	27/28 Nakshatras + Padas
Concept	7th Lord, Darakaraka, Upapada, Yoga
Chart	D1, D9, D10, etc.
Dasha	Mahadasha, Antardasha, sub-periods
Event	Marriage, career change, childbirth, relocation
Rule	Machine-readable Koonji rule
Source	Book, edition, chapter, verse/page
School	Parashari, Jaimini, KP, Nadi, etc.
Evidence	Test cases, validation metrics, expert review

Example graph path: 7th Lord → Marriage → D9 → Darakaraka → Upapada → Dasha → Transit → Event Window.

11. RETRIEVAL — THREE SYSTEMS, NOT JUST RAG

Retrieval	Purpose
Semantic/vector	Find relevant source passages and commentary
Structured SQL/document DB	Find exact concepts, rule IDs, conditions, schools and applications
Knowledge graph	Traverse relationships among planets, houses, rules, sources, Dashas and events

Combine all three. A vector database alone cannot reliably represent a complex rule system.

12. SOURCE AUTHORITY & CONFLICT ENGINE

Assign source tiers, for example: S0 primary classical text; S1 traditional commentary; S2 scholarly/critical edition; S3 established practitioner; S4 modern interpretation; S5 experimental/community material. These are engineering categories, not claims about spiritual authority.

When two rules conflict, store both. Record school, source, conditions, exceptions, validation results and current resolution policy. Never average contradictory doctrine into a new rule without explicitly creating an experimental rule.

13. DETERMINISTIC CALCULATION ENGINE — BUILD IN PARALLEL

The AI team must not ask the LLM to calculate charts. Build a tested astronomy/time engine with a clearly specified reference framework and reproducible outputs.

Calculation area	Required capability
Time	UTC/local time conversion, historical timezone/DST handling, calendar/date handling
Location	Latitude/longitude, geocoding source, elevation where needed
Planets	High-precision planetary positions and velocities
Lagna/Houses	Ascendant and configurable house systems required by supported traditions
Zodiac	Configurable sidereal/tropical framework; explicit ayanamsha configuration
Nakshatra	Longitude → Nakshatra → Pada with versioned definitions
Varga	Deterministic divisional-chart construction with school/version rules
Dasha	Deterministic start/end dates and sub-periods
Transit	Reproducible transit calculations
Panchanga	Tithi, Vara, Nakshatra, Yoga, Karana and related calendar elements
Strength	Shadbala and other supported calculations
Ashtakavarga	BAV/SAV calculations
Audit	Every calculation stores inputs, configuration and engine version

Use an established ephemeris/calculation library with appropriate licensing and verify outputs against independent astronomical references. The specific library/version and ayanamsha policy must be locked and versioned.

14. PALMISTRY / FACE / NUMEROLOGY — DON'T BOLT THEM ON AS CHAT FEATURES

Each additional modality needs the same architecture: input → observation/calculation → domain ontology → rules → source → reasoning → validation → explanation.

Modality	Input layer	Knowledge layer
Palmistry	Palm/hand image + CV measurements	Samudrika/palmistry rules + source
Face reading	Face image + landmarks/features	Physiognomy corpus + source
Numerology	Name/date/numbers	Selected numerology system + exact formula
Vastu	Property/site/layout	Vastu ontology + spatial rules
Prashna	Question + timestamp/location	Horary chart + Prashna rules

15. VALIDATION — THE RISHIVAN ASTROLOGY LAB

This is essential if Rishivan wants to make strong claims about being advanced. Build an evaluation laboratory before declaring superiority.

Test layer	Method
Rule test	Unit-test every deterministic rule/calculation.
Historical backtest	Use charts with documented real events; hide outcomes from prediction engine.
Blind test	Researchers submit charts/questions without exposing target answers.
Temporal holdout	Train/derive rules on earlier data and test on later unseen data.
Cross-school test	Measure each school separately and combined.
Calibration	Compare confidence levels with actual hit rates.
Ablation	Remove one component and measure performance change.
Adversarial test	Test malformed inputs, ambiguous birth times and conflicting rules.
Expert review	Astrologers/researchers audit source mapping and interpretations.
Regression suite	Every engine update reruns the complete test suite.

Do not train and test on the same cases. Do not let the model see the target event when evaluating prediction.

16. BIRTH-TIME RECTIFICATION — SEPARATE RESEARCH ENGINE

If Rishivan offers rectification, treat it as a constrained inference problem, not a conversational guess.

Inputs: approximate birth window + verified life events → candidate times → deterministic charts → school-specific rules → event-fit scoring → uncertainty interval → ranked candidates → human review.

Never claim false precision. If several times fit similarly, show the uncertainty rather than inventing a single exact minute.

17. REMEDIES / SPIRITUAL PRACTICES — SOURCE-GROUNDED ONLY

If the product later includes mantras, puja, gemstones, charity or other traditional remedies, create a separate remedy corpus and record exactly which tradition/source recommends each practice.

The system must distinguish traditional recommendation from scientific/medical claim. Avoid presenting ritual or astrological remedies as guaranteed medical treatment or guaranteed outcomes.

18. THE LLM'S JOB

The LLM should be the final interpreter and communicator, not the source of astrological facts.

LLM may do	LLM must not do
Explain structured conclusions	Invent planetary positions
Compare cited interpretations	Invent citations
Ask clarifying questions	Rewrite canonical rules silently
Adapt language to the user	Override deterministic calculations
Summarize uncertainty	Hide conflicts
Generate reports	Turn unsupported anecdotes into facts

Every final answer should be reproducible from stored chart facts + retrieved Koonji rules + source evidence.

19. PRODUCTION ANSWER CONTRACT

Every advanced answer should internally contain: 1. Question intent 2. Chart/calculation facts 3. Selected school(s) 4. Relevant concepts 5. Applied Koonji rules 6. Conditions/modifiers 7. Exceptions 8. Source citations 9. Cross-school agreement/conflict 10. Timing calculation 11. Evidence/validation level 12. Final synthesis 13. Uncertainty / caveats 14. Human-readable explanation

20. TEAM IMPLEMENTATION BACKLOG

Workstream	Definition of done
Corpus	Master registry contains every acquired source with provenance and rights metadata.
OCR	High-quality verified text with page/verse alignment.
Ontology	Versioned domain/school/concept taxonomy.
Koonji	Rules have IDs, conditions, exceptions and source references.
Graph	Concept/rule/source relationships are queryable.
Calculator	Reproducible chart calculations pass independent checks.
School engines	Parashari/Jaimini/Nadi/KP/etc. remain isolated and testable.
Router	Questions map to domains, concepts and source sets.
Evidence	Source tier + validation state attached to rules.
Backtesting	Unseen historical datasets and blind evaluation framework exist.
Synthesis	Combines evidence without silently merging doctrines.
LLM	Explains only what the structured engine establishes.
Governance	Rule/version changes are auditable and reversible.

21. THE GOLD STANDARD RULE

If Rishivan cannot show how an important conclusion travels from user question → calculation → rule → source → validation → final explanation, the engine is not finished.

22. FINAL DIRECTIVE TO BHARAT AND THE TEAM

Bharat: the goal is not to possess the world's largest folder of astrology PDFs. The goal is to build the world's most rigorous source-grounded astrology intelligence architecture that can continuously absorb new books without losing provenance, school boundaries or rule integrity.

The master corpus should therefore be treated as a living research library. Every new book follows the same pipeline. Every rule gets an identity. Every interpretation knows its school. Every calculation is deterministic. Every important conclusion is traceable. Every high-impact rule is testable. The LLM sits on top of this machinery and explains the result.

FINAL BUILD ORDER: Corpus → Registry → Verified Text → Domain Map → Concepts → Koonji → Knowledge Graph → Calculation → School Engines → Validation → Synthesis → LLM.

This blueprint is the target architecture. It is deliberately ambitious, but “most advanced in the world” must ultimately be demonstrated through measurable source coverage, calculation accuracy, rule coverage, validation performance, traceability and user outcomes—not claimed merely because the system contains many books.

RISHIVAN: KNOW THE SOURCE. CALCULATE THE FACT. APPLY THE RIGHT TRADITION. TEST THE RULE. SYNTHESIZE THE EVIDENCE. EXPLAIN IT CLEARLY.
